

How to use O'Reilly Answers

O'Reilly Answers is an advanced natural language processing engine that finds quick solutions to challenging technical questions. Just ask a question and O'Reilly Answers leverages machine learning techniques to scan expert content across thousands of O'Reilly titles to deliver highly relevant content snippets to further explore. It's even easier to use than it sounds.

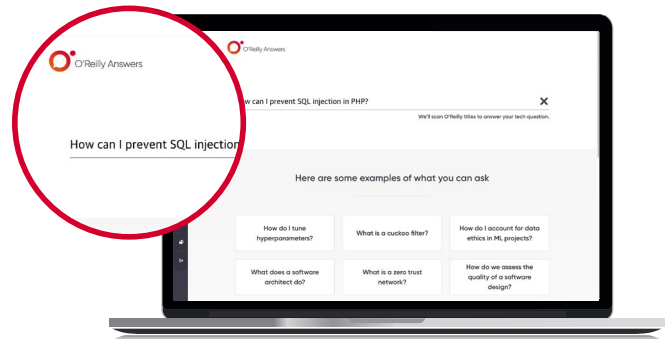

1. Find Answers

Once you've logged on to O'Reilly online learning, click "Answers" on the left-side navigation bar.

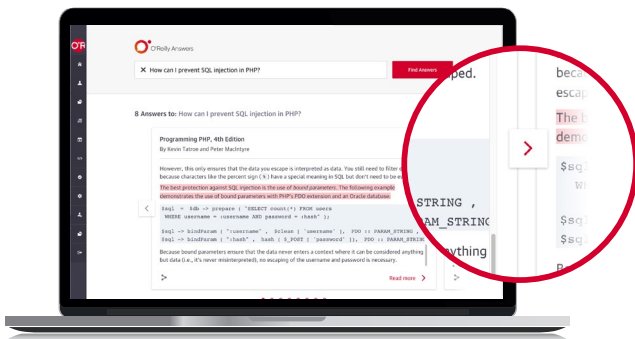

2. Ask questions

Just type in any question you might have, from something as general as "What is ACID?" to a more specific "How can I prevent SQL injection in PHP?"

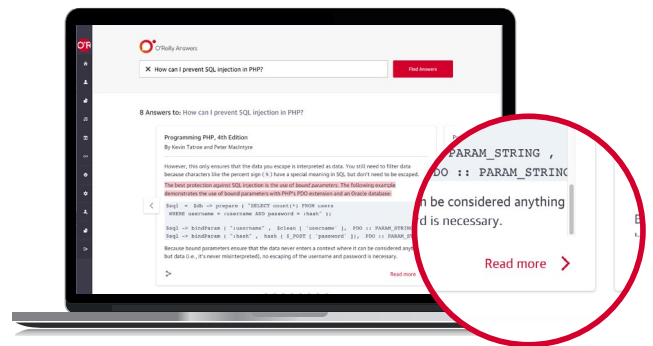

3. See results

O'Reilly Answers finds and highlights the content that best answers your question. Click the arrows to get to additional answers.

4. Know more

You can scroll to see more information to better understand the context of your highlighted answer. Or click "Read more" on any selection for even more information.
